

Reforestation in Limay, Nicaragua

Location	Limay (Nicaragua)
Type of Project	Afforestation, reforestation and agroforestry
Type of verification	Plan Vivo
Price per ton	7.5

Limay Community Carbon Project is a reforesting community initiative that groups small farmers in Nicaragua. The aim of the Project is reforesting some parts of their unused lands and the initiative has been promoted by the NGO Taking Root. The Project takes place in a basin that feeds the Estuario Real, one of the most important estuaries in Central America in terms of biodiversity.

The Project makes sure it addresses the causes of deforestation by making the community participate in the works, and it also gives participants economical benefits.

Benefits of the Project

Thanks to its multifaceted approach, the Project brings innumerable benefits

Preserving the ecosystems

Improving the livelihoods of farmers

Mitigating climate change

About Taking Root

Taking Root is a nonprofit organization that develops social reforestation programs in conjunction with small farmers in Nicaragua. More info: www.takingroot.org
